My Professional Profile

My name is Loester Botelho. I am a Senior Software Engineer at Intel.

I design, develop, and maintain scalable enterprise software applications.

I work with Java, Spring Boot, SQL, REST APIs, cloud technologies, Docker, and Kubernetes.

Core Technical Responsibilities

Collaboration

I collaborate with cross-functional teams to deliver reliable, secure, and high-quality software.

Code Review

I review pull requests, mentor developers, and ensure that the source code follows engineering best practices.

Testing & QA

I create unit tests and integration tests to improve software quality and reliability.

Operations & Monitoring

I deploy applications, monitor production environments, and analyze logs to quickly identify and resolve issues.

Architecture & Growth

I solve complex technical problems and continuously improve software architecture and development processes.

Daily Schedule (Morning)

Time	Activity Description
8:00 a.m.	I start my workday by reviewing my priorities and organizing my development tasks.
8:15 a.m.	I check my emails, respond to important messages, and follow up on pending requests.
8:30 a.m.	I attend the Daily Scrum meeting, share project updates, and discuss technical challenges with my team.
9:00 a.m.	I analyze business requirements and translate them into efficient software solutions.
10:00 a.m.	I design scalable software architecture and develop secure, high-performance applications.
11:00 a.m.	I write unit tests and integration tests to ensure software quality and reliability.
11:30 a.m.	I review pull requests and provide feedback according to software engineering best practices.
12:00 p.m.	I have lunch with my colleagues.

Daily Schedule (Afternoon)

Time	Activity Description
1:00 p.m.	I test new features, validate application behavior, and ensure requirements are correctly implemented.
2:00 p.m.	I investigate bugs, identify the root cause of technical issues, and implement effective solutions.
3:00 p.m.	I deploy new application releases and verify that all services are running correctly after deployment.
3:30 p.m.	I monitor production environments, analyze system logs, and respond to incidents.
4:00 p.m.	I analyze application metrics and identify performance bottlenecks to improve system efficiency.
5:00 p.m.	I plan my next tasks and organize my priorities for tomorrow.
5:30 p.m.	I finish my workday and review my daily achievements.

Daily Routine & Organization

Workday Planning

I start my workday by reviewing my priorities and organizing my development tasks.

Email Management

I check my emails, respond to important messages, and follow up on pending requests.

Sprint Organization

I plan my next activities, organize the sprint backlog, and prepare for upcoming project deliveries.

Agile & Team Collaboration

Daily Scrum

I attend the Daily Scrum meeting, share project updates, and discuss technical challenges with my team.

Cross Functional Team

I collaborate with software engineers, product owners, and QA specialists to deliver high-quality software solutions.

Technical Mentoring

I mentor junior developers, share technical knowledge, and support their professional development.

Software Analysis & Architecture

Requirements Analysis

I analyze business requirements and translate them into efficient software solutions.

Software Architecture

I design scalable software architecture and develop secure, high-performance applications.

Feature Development

I implement new features and continuously improve existing applications based on business needs.

Software Development & Coding

Testing Strategy

I write unit tests and integration tests to ensure software quality, reliability, and maintainability.

Development Automation

I automate repetitive tasks and improve the software development workflow using modern development tools.

Performance Optimization

I optimize application performance and continuously improve system reliability and scalability.

Code Review & Quality Assurance

Pull Request Review

I review pull requests, analyze code quality, and approve or request changes according to software engineering best practices.

Code Standards

I perform code reviews and provide constructive feedback to improve software quality and maintain coding standards.

Feature Validation

I test new features, validate application behavior, and ensure that all requirements are correctly implemented.

Debugging & Problem Solving

Bug Investigation

I investigate bugs, identify the root cause of technical issues, and implement effective solutions.

Performance Analysis

I analyze application metrics and identify performance bottlenecks to improve system efficiency.

Technical Solutions

I solve complex technical problems by applying software engineering principles and best practices.

Deployment & Production Support

Application Deployment

I deploy new application releases and verify that all services are running correctly after deployment.

Production Monitoring

I monitor production environments, analyze system logs, and respond to incidents to ensure application stability.

Incident Response

I investigate production issues and implement solutions to maintain system reliability and availability.

Documentation & Knowledge Management

Technical Documentation

I update technical documentation and maintain accurate project information for the development team.

Knowledge Sharing

I share technical knowledge, best practices, and lessons learned with the engineering team.

Continuous Improvement

I improve development processes by documenting solutions and creating reusable technical knowledge.
